

## Body Condition Scoring

Although measuring the weight of your horse is extremely useful, body condition scoring helps determine if that weight is appropriate for your individual horse.

The most commonly used system in the UK scores the horse from 0 (emaciated) to 5 (obese) with half scores used. A score of 2.5-3.5 would be considered a healthy range for the vast majority of horses. As lots of horses deposit fat unevenly the body is divided into three areas:

1) Neck and shoulders 2) Back and ribs 3) Pelvis

Particular areas where fat is deposited include the neck; behind the shoulder; over the ribs; along the withers and backbone; the pelvis and rump.

### A practical guide to body fat scoring your horse

Score each of these areas from 0-5 using the diagrams on the scoring chart on page 2.

**Neck/ shoulder** - Feel along the top of your horse's crest, it should wobble. The shoulder should be clearly defined. If your hand runs smoothly from the neck to the shoulder, this indicates excess fat in front of the shoulder.

**Back and side** - Run your hand over the back, you should be able to feel the spine. If your hand lays flat across their back, they are carrying too much fat. You should be able to feel their ribs with ease. If you can't feel them, or have to press firmly, your horse is carrying excess fat.

**Hindquarters** - Run your hand over the hip bones, which you should see. If you are unable to feel or see them, your horse is carrying too much fat. Safely look at your horse from behind. Their hindquarters should be rounded with limited fat pads around the tail head.

## Body Condition Scoring Chart

### 0 Emaciated

- Prominent spinous processes, ribs, tail-head
- Prominent withers, shoulders and neck
- No fatty tissue can be palpate

### 1 Thin

- Slightly less emaciated
- Slight fat covering over base of spinous processes
- Transverse processes of lumbar vertebrae feel rounded
- Withers, shoulders and neck faintly noticeable

### 2 Lean

- A slightly narrow neck
- Ribs just visible and can be felt
- A thin coating of fat covering the entire body
- You can feel the spine
- Croup well defined

### 3 Moderate

- No crest
- Ribs cannot be visually distinguished but can be easily felt
- Withers appear rounded over spinous processes
- Shoulders and neck blend smoothly into body shape

### 4 Fat

- Crease along back
- Difficult to palpate ribs
- Fat around tail-head is very soft
- Noticeable thickening of the neck and cresty appearance

### 5 Obese

- Obvious crease along back
- Patchy fat appearing over ribs
- Bulging fat around tail-head, along withers, behind shoulders and along neck
- Fat along inner buttocks
- Large crest
